Descriptions

The DIO2072x is a single/dual/quad channel, rail-to-rail I/O operational amplifier which allows low load impedances to be driven. With a 10MHz unity-gain frequency and low noise, low distortion and high output current capability, the DIO2072x provides excellent choice for high quality systems. The input common-mode voltage range includes ground, and the maximum input offset voltage is 0.5mV (guaranteed). They are also capable of comfortably driving large capacitive loads. DIO2072x is offered in Green or RoHS package and ESD (HBM) exceeds 2kV. It is specified over the extended -40 to 125°C.
